A;Title: Preferential utilization of conserved immunoglobulin heavy chain variable gene A;Accession: C36005
A;Accession: C36005
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A;Molecule type: DNA
A;Residues: 1-122 <CAT>
A;Residuence was determined from the germline gene
C;Comment: This chain was isolated from a hybridoma protein that binds influenza virus
C;Comment: This chain was isolated from a hybridoma protein that binds influenza virus
C;Superfamily: immunoglobulin V region; immunoglobulin homology
C;Keywords: heterotetramer; immunoglobulin
C;Keywords: heterotetramer; immunoglobulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ø
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      E27888
Ig heavy chain V region (H35-C6) - mouse
Cispecies: Was musculus (house mouse)
Cipbate: 15-Dec-1988 #sequence_revision 15-Dec-1988 #text_change 16-Aug-1996

"Amino acid sequence of the variable region of a human mu chain:

"Amino acid sequence of the variable region of a human mu chain:

Docation of a possible JH segment.

Proc. Natl. Acad. Sci. U.S.A. 77:239-3243 (1980).

-! MISCELLANEOUS: THIS MU CHAIN WAS ISOLATED FROM THE PLASMA OF PATIENT WITH MACROGLOBULINEMIA.

-! SIMILARLY: Contains 1 immunoglobulin-like domain.

         The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary anzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #30 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Llama antibody; camelid; anorectic; heavy chain variable domain; VHH; human dietary enzyme inhibitor; medicament; human pancreatic lipase; HPL; food; human gastric lipase; HGL; cosmetic control; body weight.

                                                                                                         chain variable domain (MHE) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #12 from llama (camelid) species

                                                                                                                     The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #14 from llama (camelid) species

                                                                                                                                                                                                                                                                                                                                 The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancrearic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #15 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 DSVKGRFTISRDNTLNTVYLQMNDLKPEDTGVYYWNADVRPYRTSRYL-EIWGQGTLVTV 119

                                                                                                                                                                                                                                The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #19 from llama (camelid) species

The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #18 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DSVKGRFTISRDNTLNTVYLQMNDLKPEDTGVYYWNADVRPYRTSRYLEIWGQGTLVTVF 120

                                                                                                                                                                                                                                                                                                                                                           The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #13 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     antibody; camelid; anorectic; heavy chain variable domain; VHH; dietary enzyme inhibitor; medicament; human pancreatic lipase; HPL; human gastric lipase; HGL; cosmetic control; body weight.

```
The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HGL inhibiting VHH fragment, HGL #9 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 DSVKGRFTISRDNTLNTVYLOMNDLKPEDTGVYYWNADVRPYRTSRYLEIWGOGTLVTVF 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 DSVKGRFTISRDNIKNTMYLQMNSLKPEDTGVYYCAG-----TGAEGHYWGQGTQVTVS 114

The present invention relates to a method for modifying a plant to produce an antibody or an active fragment or derivative, or a protein functional equivalent, in a cellular compartment comprises introducing a DNA sequence encoding a heavy chain immunoglobulin, where the DNA is linked to promoters and provided with an additional sequence encoding a peptide capable of targeting heavy chain immunoglobulin to a cellular compartment. The method is used for producing a heavy chain immunoglobulin or an active fragment or derivative, or a protein that is functionally equivalent for increasing the pathogen resistance in a plant or to modulate metabolism in a plant. Under some circumstances it may be desirable to retain the antibody product with the plant rather than extraoring and isolating the pathod. In particular, edible selected antigens may be used in a method of passively immunising an animal, preferably human, against the antigen, e.g., pathogenic organisms. The preferably human, against the antigen, e.g., pathogenic organisms. The preferable domain (VH) attached to peptide linkers, myc and hise tag. The potato SBEII is a starch branching enzyme also designated SBE A

The invention describes a protein array (I) comprising a number of heavychain variable domain antibodies or antibody fragments, obtainable from chain variable domain antibodies or antibody fragments, obtainable from camelidae. The method is useful for removing abundant proteins from an extract or sample which do not provide useful information on the condition of a cell or tissue in the extract or sample to be condition of a cell or tissue in the extract or sample to be proteins in a sample, comparing the distribution of proteins in different cell types, and identification of proteins that may be of importance in determining the altered properties of cells in disease, aging or other conditions. Using a heavy-chain variable domain derived from an immunoglobulin that is naturally devoid of light chains (VHH) in (I) provides a number of advantages, such as an improvement of sensitivity/resolution in the order of 10-100 times, and detection of post-translationally modified proteins. The invention also describes a centhod (II) that enables the simultaneous processing of large numbers of panning condition. This feature combines in corporated phage-ELISA for continuation of a limited number of selections. In (II), due to the fact that many different conditions can be tested, varying amounts of input-phages can be used simultaneously in order to decrease the enrichment of sticky phage. Continuels, moder to decrease the enrichment of sticky phage. The fine frames needed for the generation of large panels of antibodies in short time frames needed for the generation of arrays (proteomics). This sequence represents an immunoglobulin (Igd) heavy chain variable domain continued.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure; Fig 3; 80pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 131 AA;

The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HGL inhibiting VHH fragment, HGL #15 from llama (camelid) species
                                                                                                                                                                                                                                                                                                               antibody; camelid; anorectic; heavy chain variable domain; VHH; dietary enzyme inhibitor; medicament; human pancreatic lipase; HPL; human gastric lipase; HGL; cosmetic control; body weight.

The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipses (HBL) which are useful for the cosmetic control of body weight of human baings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #22 from

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a method for modifying a plant to produce an antibody or an active fragment or derivative, or a protein functional equivalent, in a cellular compartment comprises introducing a DNA sequence encoding a heavy chain immunoglobulin, where the DNA is peptide capable of targeting heavy chain immunoglobulin to a cellular compartment. The method is used for producing a heavy chain immunoglobulin to a cellular immunoglobulin or an active fragment or derivative, or a protein that is functionally equivalent for increasing the pathogen resistence in a plant or to modulate metabolism in a plant. Under some circumstences it may be desirable to retain the antibody product with the plant rather than

H
extracting and isolating the product. In particular, edible selected antigens may be used in a method of passively immunising an animal, preferably human, against the antigen, e.g., pathogenic organisms. The present sequence is an anti-potato SEBII antibody (denoted Clone68) heavy chain variable domain (VH) attrached to peptide linkers, myc and his6 tag. The potato SEBII is a starch branching enzyme also designated SEE A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120

                                 The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HGL inhibiting VHH fragment, HGL #16 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 DSVKGRFTISRDNTLNTVYLQMNDLKPEDTGVYYWNADVRPYRTSRYLEIWGQGTLVTVF 120

```

The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HGL inhibiting VHH fragment, HGL #4 from llama (camelid) species

New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid of light chains.

Example 4; Page 13; 37pp; English

Llama antibody; camelid; anorectic; heavy chain variable domain; VHH; human dietary enzyme inhibitor; medicament; human pancreatic lipase; HPL; food; human gastric lipase; HGL; cosmetic control; body weight. HGL inhibiting VHH fragment, HGL #4 from llama species. AAE10561 standard; peptide; 129 AA (first entry) 10-DEC-2001 AAE10561;

"Identification of glutamate-169 as the third zing-binding residue in proteinase III, a member of the family of insulin-degrading
                                                                                                                                                                           Biochem. J. 292:137-142(1993).
-!- FUNCTION: Endopeptidase that degrades small peptides of less than
-!- Aba, such as glucagon and insulin.
-!- CATALYTIC ACTIVITY: Preferential cleavage of 16-Tyr-|-Leu-17 and
25-Phe-|-Tyr-26 bonds of oxidized insulin B chain. Also acts on other substrates of Mw less than 7 kDa such as insulin and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

Bacteriol. 185:2330-2337(2003).

-!- FUNCTION: Endopeptidase that degrades small peptides of less than 7 kDa, such as glucagon and insulin (By similarity).

-!- CATALYTIC ACTIVITY: Preferential cleavage of 16-Tyr-|-Leu-17 and 25-Phe-1-Tyr-26 bonds of oxidized insulin B chain. Also acts on other substrates of Mw less than 7 kDa such as insulin and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pfam; PF00675; Peptidase_MI6; I. -!- FUNCTION: Endopeptidase that degrades small peptides of less than 7 kDa, such as glucagon and insulin (By similarity).

-!- CATALYTIC ACTIVITY: Preferential cleavage of 16-Tyr-|-Leu-17 and 25-Phe-|-Tyr-26 bonds of oxidized insulin B chain. Also acts on other substrates of Mw less than 7 kDa such as insulin and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pfam; PF00675; Peptidase M16; 1.

Immun. 71:2775-2786 (2003).
-!- FUNCTION: Endopeptidase that degrades small peptides of less than 7 kDa, such as glucagon and insulin (By similarity).
-!- CATALYTIC ACTIVITY: Preferential cleavage of 16-Tyr-| Jeu-17 and 25-Phe-|-Tyr-26 bonds of oxidized insulin B chain. Also acts on other substrates of Mw less than 7 kDa such as insulin and
                                                                                                                                                                                                                                                                                                                                                                            "Genome sequence of Shigella flexneri 2a: insights into pathogenicity through comparison with genomes of Escherichia coli K12 and O157."; Nucleic Acids Res. 30:4432-4441(2002).

-!- TISSUB SPECIFICITY: Expressed in embryonic ectoderm. In larvae,
expression is restricted to imaginal disks and brain.
-!- DEVELOPMENTAL STAGE: Expressed throughout embryogenesis where it
is first detected during gastrulation. Also expressed in larvae
                                                                                                                                       Annotation of the Drosophila melanogaster euchromatic genome: a

The genome sequence of Bifidobacterium longum reflects its adaptation
to the human gastrointestinal tract.";
Proc. Natl. Acad. Sci. U.S. 99:4422-14427(2002).
-: CATMLYIC ACTIVITY: ATP + L-arginine + tRNA(Arg) = AMP +
diphosphate + L-arginyl-tRNA(Arg).
-: SUBGNATT: Monomer (By similantry).
-: SUBGRILUAR LOCATION: Cytoplasmic.
-: SIMILARITY: Belongs to class-I aminoacyl-tRNA synthetase family.
                                                                                                                                                                                                                                                                                                                                                          15-WAR-2004 (Rel. 43, Last sequence update)
15-WAR-2004 (Rel. 43, Last annotation update)
Arginyl-tRNA synthetase (EC 6.1.1.19) (Arginine--tRNA ligase) (ArgRS).
ARGS OR B11272.
Bifidobacterium longum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TICRFAMS; TICR00456; args; 1.

Schnier J., Faist G.
Schnier J., Faist G.
Comparative studies on the structural gene for the ribosomal protein
S1 in ten bacterial species.";
Mol. Gen. Genet. 200:476-481(1985).
-!- FUNCTION: BINDS MRNA, THUS FACILITATING RECOGNITION OF THE
INITIATION POINT. IT IS NEEDED TO TRANSLATE MENA WITH A SHORT
SHINE-DALGARNO (SD) PURINE-RICH SEQUENCE (BY SIMILARITY).
-!- SIMILARITY: Belongs to the S1P family of ribosomal proteins.
-!- SIMILARITY: Contains 5 S1 motif domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         - RNA)(N).
- SUBUNIT: Influenza RNA polymerase is composed of three subunits:
P1 (or PB1), P2 (or PA), and P3 (or PB2).
- SIMILARITY: Belongs to the influenza viruses polymerase PA family.
                                                                                                        {RNA}(N).
--- SUBUNIT: Influenza RNA polymerase is composed of three subunits:
P1 (or PB1), P2 (or PA), and P3 (or PB2).
---- SIMILARITY: Belongs to the influenza viruses polymerase PA family.
